

SIMPLIFYING DCS DECISIONS

Helping you navigate upgrades, migrations,
and automation solutions tailored to your needs.

WE UNDERSTAND

*Evaluating Distributed Control Systems can be overwhelming. Platforms are complex, manufacturers are unable to provide cross-platform comparisons outside of their expertise, and without internal capability or the time to research every option, **finding the right solution can feel impossible.***

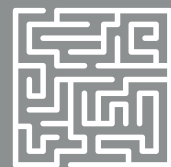

KEY CHALLENGES

Obsolescence

Aging systems rely on scarce or rebuilt components, leading to expensive maintenance, downtime, and increased cyber security risks.

System Complexity

DCS systems are layered with outdated hardware, software, and protocols, creating roadblocks for Digital Transformation, AI and Cloud Integration.

Integration Issues

Legacy equipment often struggles to communicate with modern technologies, separating the modern enterprise from the connected worker.

Supplier Lock-In

Many suppliers restrict options to specific DCS and PLC solutions, resulting in higher costs, limited flexibility, and constrained upgrade pathways.

WE CAN HELP

*EOSYS is your trusted guide to help you **navigate the complex landscape** of process automation solutions.*

HOW WE CAN HELP

Deep Technical Knowledge

With unparalleled DCS expertise, we address even the most intricate challenges systems present.

Tailored Workshops

Through workshops and FEED studies, we provide actionable insights and customized solutions aligned with your strategic goals.

Cross-Platform Expertise

With expertise across multiple platforms, we provide unbiased recommendations.

Cost-Competitive

Get top-tier engineering more cost effectively than platform OEMs are able to provide.

Confidence in Execution

With years of successful projects and satisfied clients, you can have confidence that EOSYS can handle even the most complex challenges.

WE BELIEVE

*Achieving the right automation solution starts with a clear plan and expert guidance. **Every step should be tailored to your unique needs**, from evaluation to implementation and beyond.*

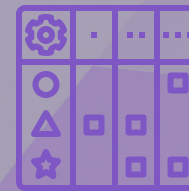

GUIDING YOU TO THE RIGHT SOLUTION

Planning & Workshops

We collaborate closely with your team to understand your unique operational challenges and goals, providing a structured approach to evaluating your current systems and identifying opportunities for improvement.

Platform Selection Tailored to You

Using our cross-platform expertise, we provide a detailed comparison of available platforms, enabling you to make informed decisions that best suit your technical and financial requirements.

Design, Install, & Support

From initial concept through implementation and beyond, our team ensures seamless integration, efficient installation, and comprehensive support to keep your systems operating at peak performance.

WE GUIDE YOU

*Our experts guide you **through clear comparisons and strategies** tailored to your plant process and operational needs.*
